PROFESSIONAL SUMMARY

Results-oriented Software Engineer with nearly 3 years of experience architecting mission-critical systems for FinTech, Government, and Law Enforcement sectors. Specialized in high-performance Java Spring Boot backends and cross-platform React Native applications. Proven track record optimizing legacy systems and engineering real-time, high-frequency transaction platforms. Adept at AI-assisted development tools and modern DevOps pipelines.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL

Backend & Architecture: Spring Boot, Microservices, REST APIs, Apache Kafka, Redis, JWT Authentication

Frontend & Mobile: React Native, React.js, Next.js, Expo

Database: PostgreSQL, MS SQL Server, MongoDB, Firebase

DevOps & Cloud: Docker, CI/CD, Render, Fly.io, Netlify, Git

Automation: IBM Automation, n8n Workflows

PROFESSIONAL EXPERIENCE

Kalmus Labs

Mobile Engineer

Oct 2024 – Present | Remote

- Built Remora’s React Native mobile app — an AI tutor platform enabling users to upload documents and engage in intelligent, context-aware learning sessions.
- Engineered the Highlight Modes system — users highlight text and instantly receive AI-generated actions (definitions, examples, solutions, critiques) without leaving the reading view.
- Implemented three reading modes: Study, Explore, and Relax, each exposing tailored AI actions contextual to the content type.
- Built Remora’s highlight history and annotation system with star/save functionality, keeping highlights attached to documents for later reference.
- Integrated in-document highlights with a side chat panel for deeper AI conversations, and architected the document reader with full PDF support and real-time text selection.

InTec System

Full Stack Engineer / Lead Backend Engineer

Apr 2023 – Present | Skopje, MK

- Served as Lead Backend Engineer for 2 years, driving architectural decisions for enterprise software used by the Ministry of Internal Affairs, Finance Police, and Municipalities.
- Spearheaded a legacy banking system refactor, improving page load performance by 80% for thousands of daily active users.
- Designed and deployed the “E-Evidence” platform, a digital case management system utilized by international law enforcement agencies to handle sensitive evidential data securely.
- Developed robust backend infrastructures for major banking institutions, optimizing SQL queries to handle massive data loads with zero downtime.
- Built and launched multiple React Native apps for city services (Civic Reporting App for Skopje), overseeing the full lifecycle from UI/UX to App Store/Google Play deployment.
- Implemented Dockerized CI/CD pipelines, reducing deployment friction and enhancing team velocity by over 30%.

Freelance Software Engineer & Consultant

Self-Employed

Apr 2019 – Present | Remote

- Engineered an Online Auction Platform (Spring Boot, React, Apache Kafka, Redis) processing thousands of real-time bids per minute with zero data inconsistency under heavy load.
- Designed automation workflows for a travel agency using n8n and IBM Automation, and delivered high-performance web platforms using Next.js and React including USTourBalkan.
- Developed a custom Warehouse Management System (JavaFX) to digitize inventory tracking and optimize stock levels for retail clients.

EDUCATION

International Balkan University | Bachelor of Computer Engineering Oct 2018 – Jun 2022 | Skopje, MK

CERTIFICATIONS & LANGUAGES

Certifications: Udemy Java Masterclass, Meta React Native Developer Course

Languages: English (Professional), Turkish (Native), Macedonian (Fluent), Serbo-Croatian (Fluent)
